FARMERS EVERYWHERE ARE WONDERING

and seedsmen as well, just when is the right time to buy farm seeds. In no recent year has there been so much uncertainty as to the amount of seed that would be available. Floods this summer in Iowa, Kansas and Missouri sent hay prices and summer seeding demands soaring. Large acreages of Alfalfa and Lespedeza were cut for hay - others were damaged and less than normal acreages were left for seed production. Then too, early snows in some areas and excessive rains in others further reduced the amount of seed actually harvested.

Seed has not moved as readily from producers as has been normal and there has been some holding back for higher prices while at the same time both large and small processors and handlers have been anxious to get at least a part of their seed requirements so that bidding up has occurred.

Likewise, several of the leading seed corn and seed oats producing states were affected by too much rain in some sections and too little in others so again seed production suffered and demands increased. For the first time in recent years there is concern as to whether there will be enough good quality seed corn and oats for everyone.

In spite of these unfavorable conditions affecting supplies and ultimately the price of seed we believe the final buyer can feel fortunate that present quotations are so close to those of a year ago. To us this seems like the right time to order at least a part of your seed requirements. You now have the widest choice of variety and quality of seeds and certainly there are few, if any, indications for lower prices.

Especially when good stands, top production and increased demand for farm products are so important anything less than buying the best in farm seeds seems like false economy. SCOTT'S policy of furnishing a wide selection of the new, higher producing varieties as well as the best in quality of older kinds gives a low per-acre cost for crop insurance. There are no finer seeds nor better values when the crop to be harvested is considered.

Start with good seed. It's going to take the same land, time and work to get the field ready and to look after the crop. Prove to yourself in '52 that it's the best seed that makes the best crops. USE SCOTT'S. Order today.

# Scotts HYBRID SEED CORN

SCOTTS Hybrid Corn has been graded for width, length and thickness and will plant easily and accurately in any make of planter. It is treated for protection against disease. The round kernels are graded uniformly and will yield just as well as the flats but special plates are usually required for accurate planting. These plates are available for most standard planters. Ohio Certified and Experimental Hybrids not listed are available upon inquiry.

SCOTTS 75—Slightly earlier and not quite as tall as most of the C Hybrids, blight resistant, sturdy stalks, large dark yellow ears, bred for handy size and high yields.

SCOTTS 99—Maturity of U. S. 13 and bred for more corn borer resistance and higher yield. Dark green color. Not quite as tall as U. S. 13. Good sized, sound ears.

Blue Clarge .....\$8.00 bu.      Woodburn .....\$7.00 bu.

SCOTTS 11—Slightly earlier than Ohio M-15. Large ears for an early hybrid. Has out-yielded Ohio M-15. Sound dark yellow ears. Suited to short season or late planting.

SCOTTS 22—The maturity of Ohio M-20 and M-34. Has outproduced its maturity class on many different farms. Good roots, sound ears, dries out quickly.

Soybeans quoted in January—Will have Hawkeye, Lincoln, Monroe, other varieties for bean, hay production
